## Introduction and overview

### Background of the research

- The Data management landscape is evolving at an extremely rapid pace with stringent privacy regulations pressing marketers to devise a sustainable data-driven strategy for creating personalized customer experiences
- There is an urgent need for marketers to explore alternative identifiers with the phasing out of third-party cookies and level up their data maturity for attaining competitive dominance in the Data management space
- In this era of CX-first businesses, customers have endless alternatives available in the palm of their hands, and therefore, marketers need to divert their efforts from Targeted marketing to 1:1 personalized marketing to decrease churn and elevate brand advocacy
- Marketers are unable to achieve true 1:1 personalization, due to challenges pertaining to data fragmentation, technology integration cost, data governance, talent, organizational change management, etc.
- There is an increased interest in Customer Data Platforms (CDPs) integrated with a Personalization engine to provide seamless personalized experiences to customers
- In this research, Everest Group has taken the opportunity to present a comprehensive roadmap for enterprises, to achieve business outcomes and mitigate challenges in their journey to accomplish true 1:1 personalization
- Since, CDPs are becoming core to personalization, we have also featured select players in the CDP space, showcasing their differentiated capabilities

### Scope of this report

**Geography**  
Global

**Technology**  
Customer Data Platform  
(CDP)

**Profiles**  
Emerging CDP players

# This research offers distinct chapters providing a deep dive into key aspects of CDPs and Data management space; below are four charts to illustrate the depth of the report

## Changing Data landscape is forcing marketers to rethink their data-driven strategies

### Events disrupting the data landscape

-  Limited access to user-level data
-  Stringent privacy laws across the globe
-  Tighter privacy laws in the operating systems of mobile devices
-  Privacy by design in hardware devices
-  Third-party cookies phasing out

## Customer data platforms rooted in data science and activation are witnessing high enterprise adoption

### CDPs rooted in data science heavy lift the data and create actionable insights

- Track and unify individual customer data for creating a unique customer profile
- Profile duplication is eliminated by sophisticated data ingesting, matching, and enrichment models
- Real-time decision-making builds highly targeted customer segments through a combination of the marketer's expertise and ML algorithms
- Enables consistent customer data access across the organization

### Personalization engines or CDPs rooted in activation drive individualized marketing

- Customer data analysis from internal and third-party sources and ongoing customer behavior
- Insights help in the curation of tailor-made experiences for customers
- Delivers content, offers, and other interactions across channels
- Collaborative filtering and content-based filtering of audience
- Uses AI and ML for continuous adjustments of customer profiles through accurate intent prediction
- A/B testing

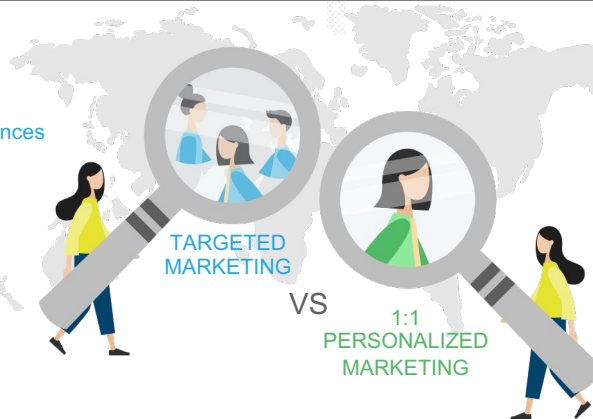

### HOW?

- Combination of CDP and activation capabilities (such as PE) is ideal for achieving a scalable 1:1 personalization
- CDP's first-party data and PE's anonymous data can be leveraged through this integration
- CDP provides data collection control to marketers and PE activates AI/ML data collection techniques
- CDP provides big data storage, data normalization, and de-duplication
- PE enables highly personalized user experiences by behavior and circumstance analysis

## Data-driven 1:1 personalization vs Targeted marketing techniques

- Driven by marketer's judgment and bias
- Slow response rate to changing customer preferences
- Macro group-based targeting of customers
- Rigid rule-based systems, easy to setup but difficult to troubleshoot
- Predictions based on limited analytics data and big market trends

- Driven by ML- based on behavioral data
- Real-time activity tracking leading to high frequency customer engagements
- Individualistic customer targeting based on evolving customer preferences
- Automated learning systems requiring less human effort
- Leverages big data for providing customized predictions

## Roadmap to achieve significant marketing outcomes from 1:1 personalization efforts

- 1 Define business objective**  
Identifying business objectives and taking the following next steps:
  - Exploring use cases
  - Business case development
  - Creating a roadmap for data-driven personalization
- 2 Know your customer data**
  - Identifying customer data sets across all channels
  - Augmenting through first, second, and third-party data sources
  - Identifying the gaps in available data
- 3 Check the current state of tech stack**
  - Understanding the currently functional tech stack
  - Creating a technical requirements roadmap for plugging gaps
- 4 Execute data change management**  
Implementing a data strategy requires change management related to the company's culture and processes. To ensure the success of the data strategy, brands need to take several steps for mitigating organizational resistance.
