Introduction

COVID-19 has had a significant impact on the adoption of care management technologies for both healthcare payers and providers due to the unique challenges and demands posed by the pandemic. The need for remote care delivery and minimizing in-person visits has propelled the rapid adoption of telehealth and virtual care solutions. Payers and providers have recognized the importance of leveraging technology to ensure the continuity of care while reducing the risk of transmission. Additionally, the pandemic has highlighted the value of data analytics and population health management in understanding disease trends, identifying high-risk populations, and making informed decisions. Care management technology enables the collection, analysis, and visualization of data, empowering payers and providers to respond effectively to COVID-19 and allocate resources efficiently. Furthermore, the challenges in care coordination and communication during the pandemic have emphasized the need for technology solutions that facilitate seamless collaboration among stakeholders. Patient-centered care models have also gained traction, with technology enabling patient engagement, self-management, and access to healthcare resources. Overall, the unique circumstances of the pandemic have accelerated the adoption of care management technology, transforming the way healthcare is delivered and reinforcing the importance of leveraging technology to meet the evolving needs of patients, providers, and payers.

In this research, we present an assessment of start-ups that offer dedicated services, software, and solutions focused mainly on the care management market, primarily focusing on their core capabilities and market impact. We present an assessment and detailed profiles of trailblazers in the care management industry.

The assessment is based on secondary research and analysis. It is based on Everest Group's ongoing tracking of exponential technology companies including start-ups.
